

Hudson Extrusions, Inc.

Hudson, Ohio, USA

Hudson Extrusions is committed to quality and continuous improvements

Hudson Extrusions, Inc. is committed to excellence and strives to exceed customer expectations. Still maintaining the ISO 9001:2000 (w/o design) quality standard, our quality policy is "Total Customer Satisfaction." We accomplish this by producing quality products, advocating continuous improvement and exceeding our customers' expectations.

Having been family owned and operated since 1956, we offer personal service that is scarce in today's technologically advanced environment. Rather than automated messages, customers are greeted by a real person, and our knowledgeable sales staff is always available to answer questions. We expanded our inside sales team in 2009 and now have a combined 30+ years of experience in the plastics industry.

Environmental awareness and proactive community involvement have high precedence in our growing business. Our focus on the environment is reflected in our renewed interest in bioplastics and in our award-winning recycling practices. Re-

using our scrap material is just one of the ways by which we reduce waste. We also help our local community by supporting the Boy Scouts of America, Junior Achievement Collaborative and The United Way.

Continued improvements of our computer capabilities accelerate response time to our customers. Our ability to run 10 extrusion lines 24 hours a day assures that we offer the best lead time in the industry.

Hudson's wide selection of stock tubing is competitively priced and available for same- or next-day shipment. We stock over 300 sizes in thermoplastic materials including polyethylene, polypropylene, EVA, thermoplastic rubber, vinyl and nylon. For applications requiring pure water or food contact, we offer NSF grade tubing.

Hudson offers a variety of profiles, including stocked spira-tube harnessing and window channels. Stock profile shapes include "J," "Z," angles, squares and "U" channels. Intricate and customer-designed profiles are available on a custom basis.

No custom job is too small; in fact, we

specialize in prototype runs. Hudson will extrude custom tubing up to a 7.5" OD. In addition to materials used in stock product, we can extrude ABS, MDPE, PC, styrene, acrylic, as well as customer-supplied materials. Jobs can be specially packaged, bar coded, color-matched or printed according to customer specifications.

Technically advanced machinery aids in special production needs, such as angle cutters capable of cutting two different angles in-line, automated saws that can cut rigid materials to tight tolerances, and high-speed short length cutters.

Through tradition and innovation, Hudson Extrusions will strive for continuous improvements in our goal of exceeding customer expectations. Our relationship with you does not end when your product is shipped; in fact, it is just the beginning.
